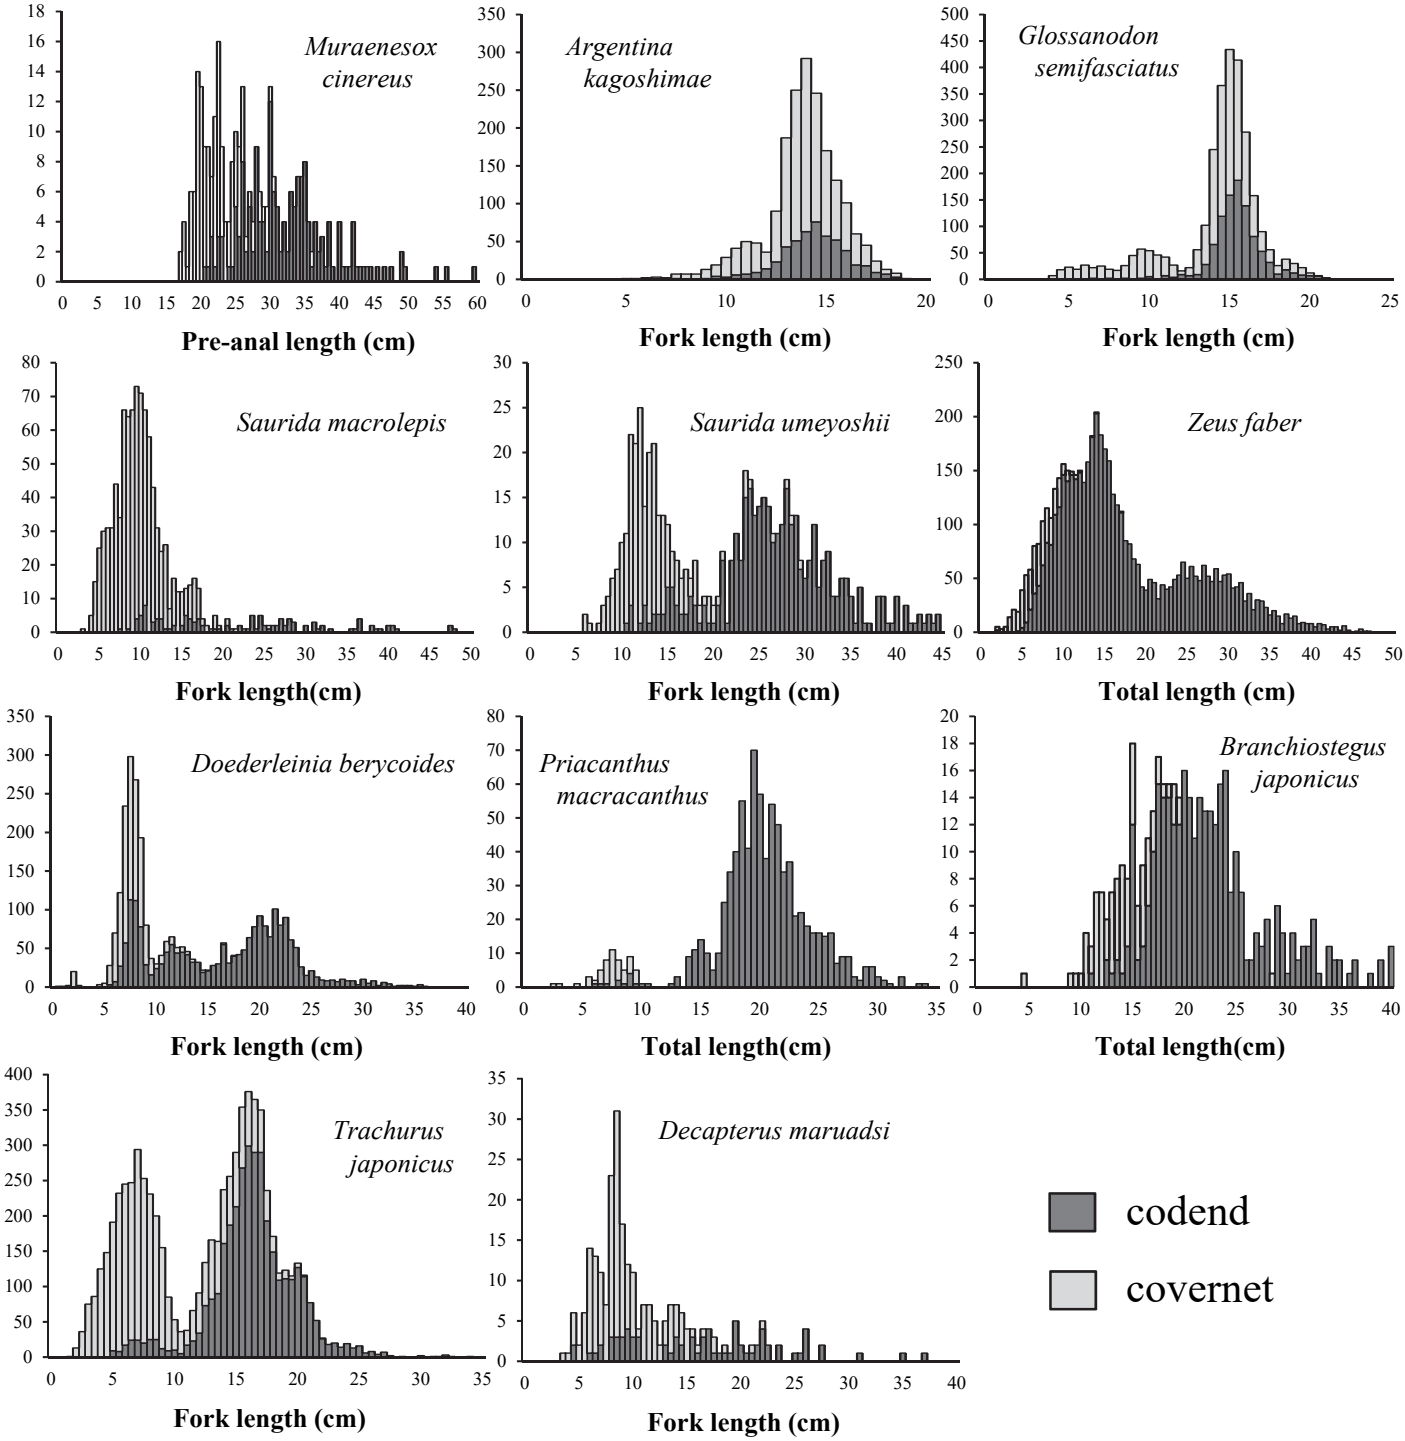

Fig. 1. Length distribution of fishes and squids caught in codend and covernet by species.

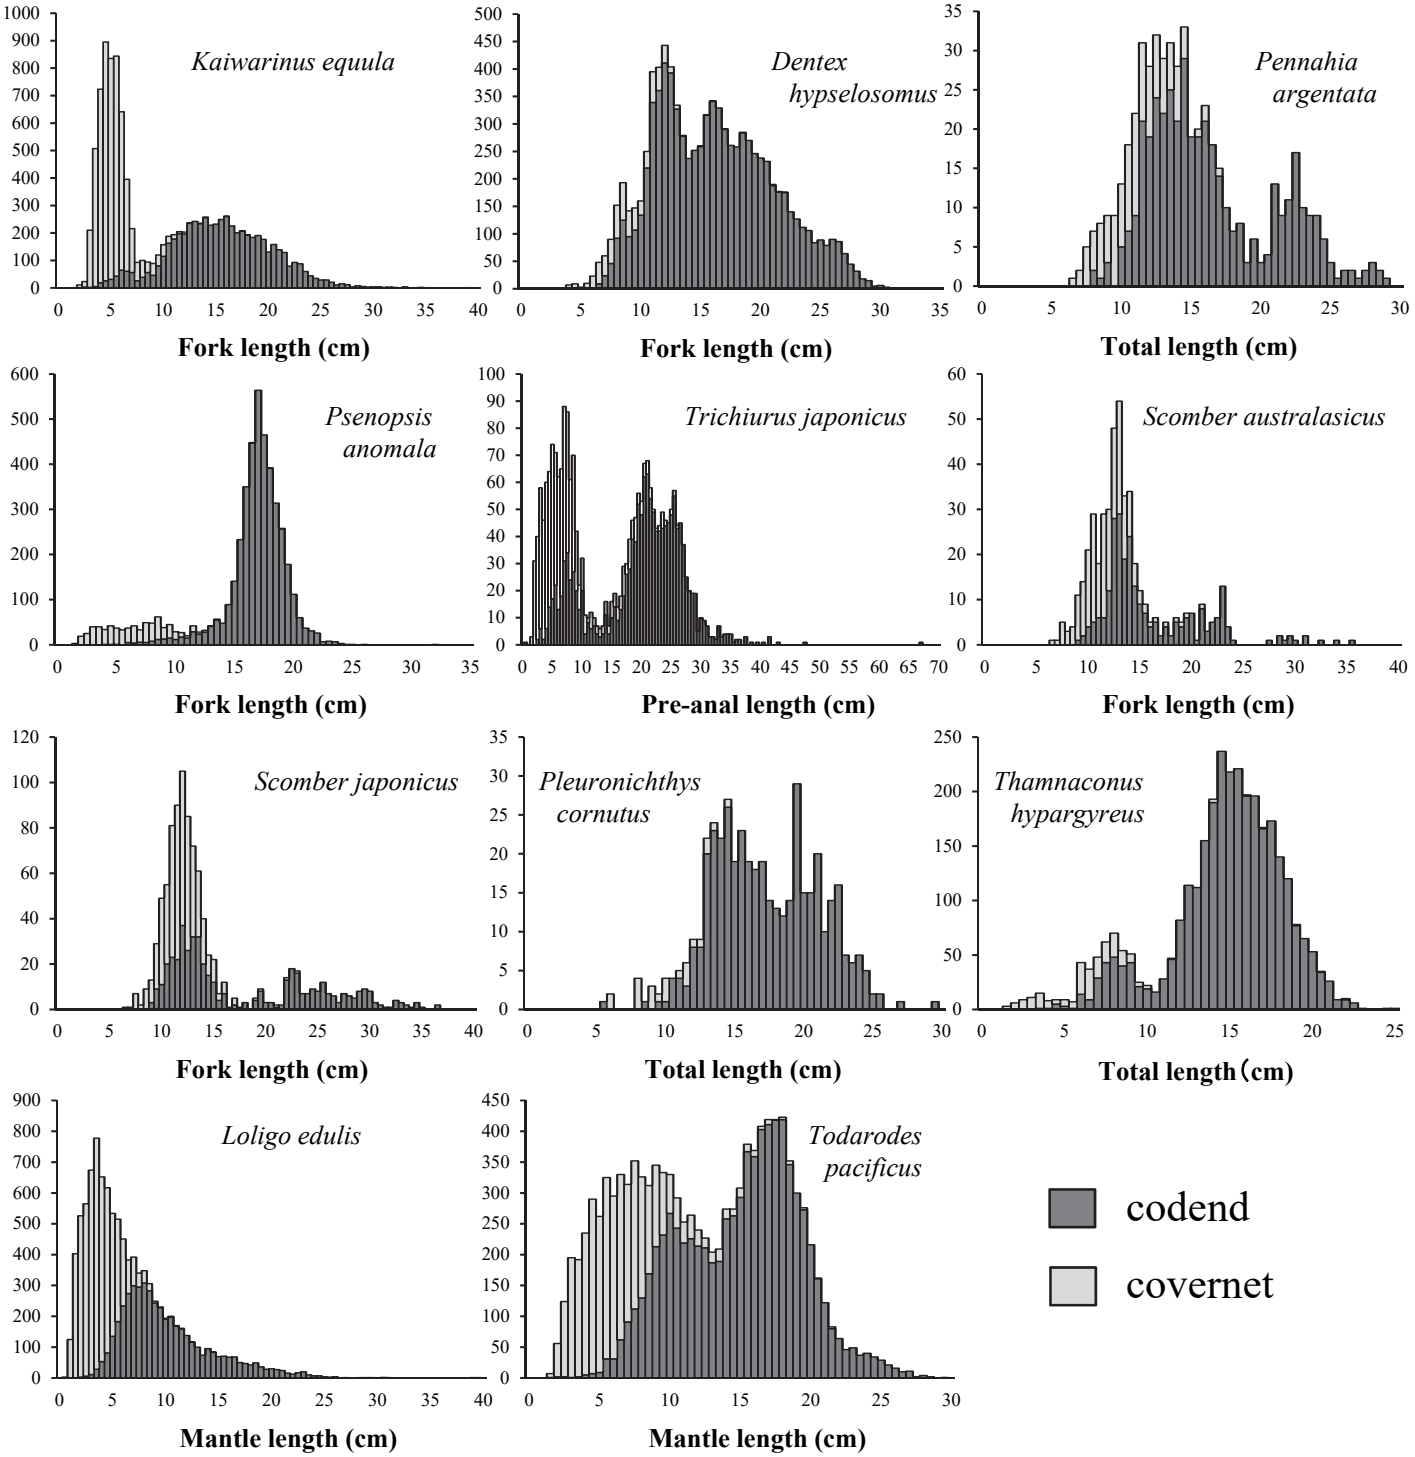

Fig. 1. (continued)

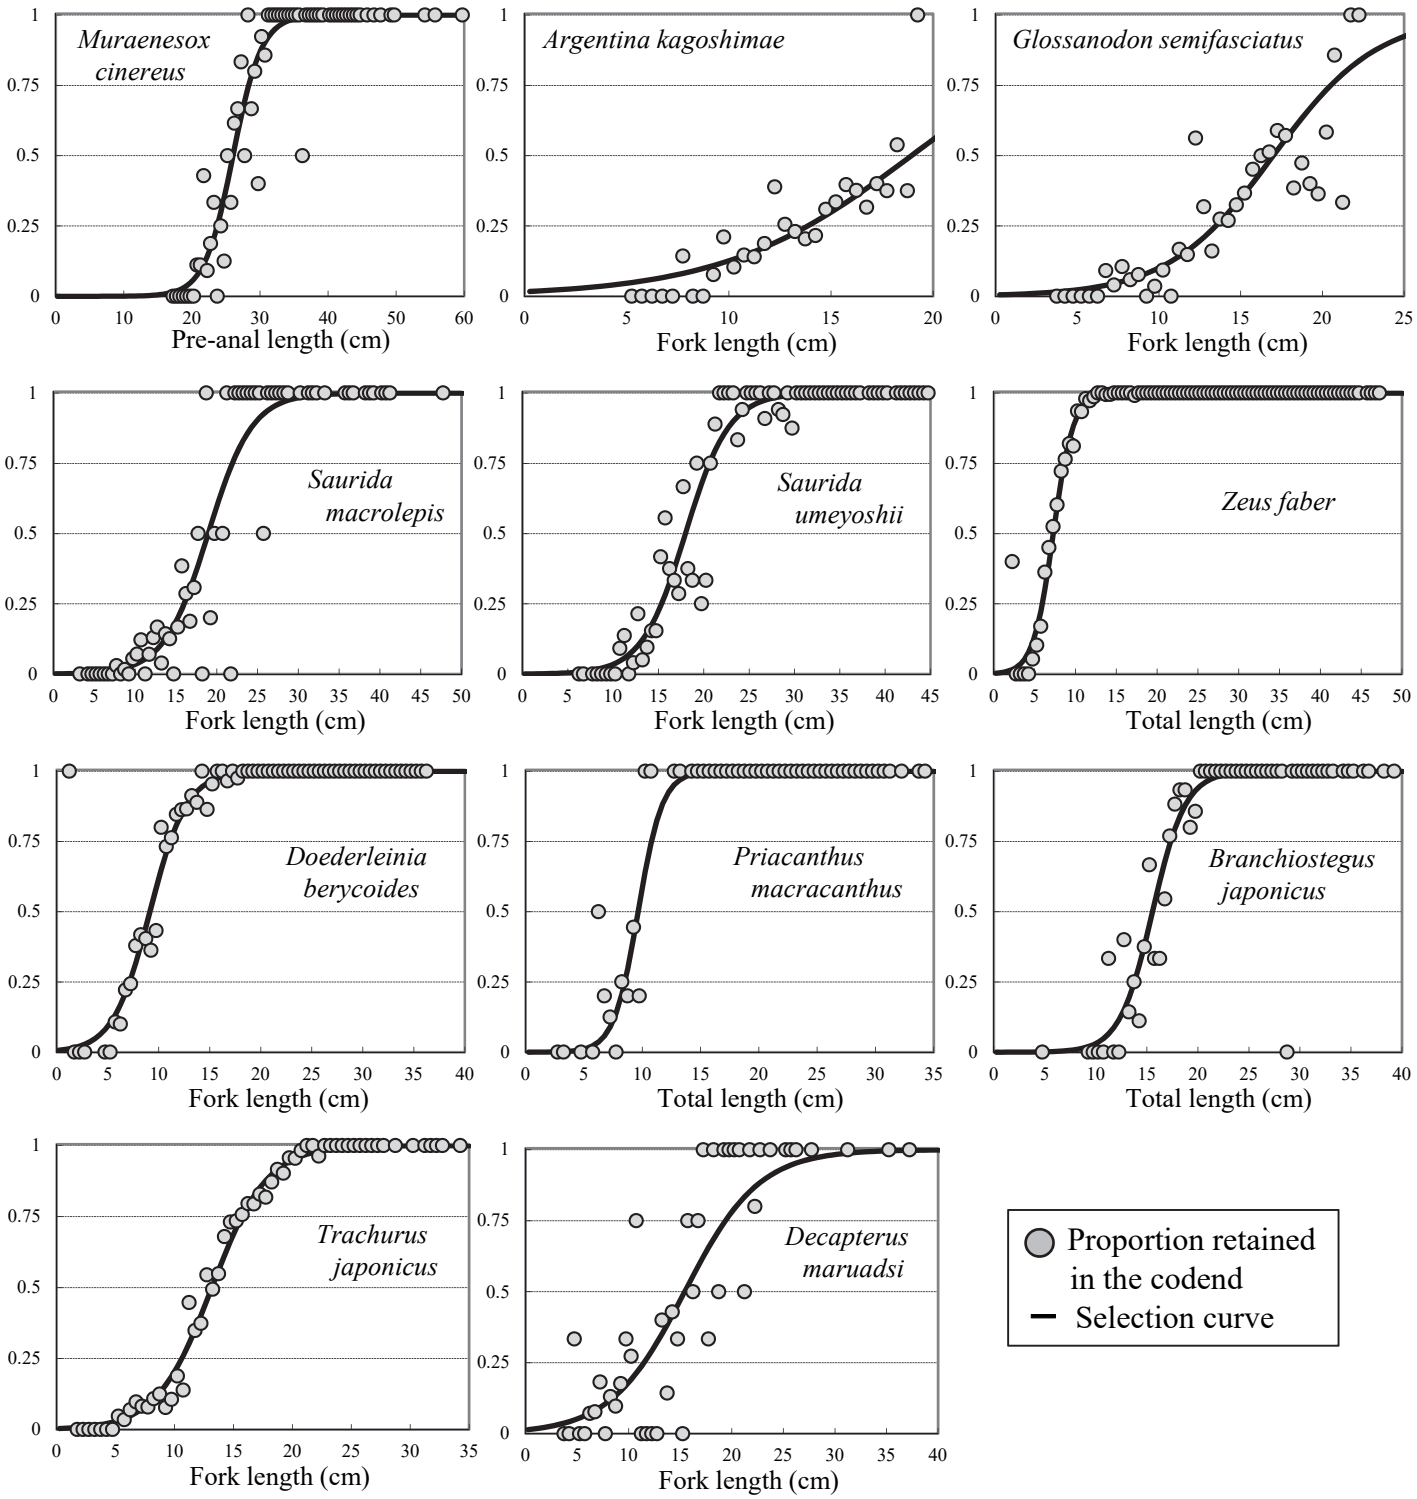

Fig. 2. Proportion retained in the codend and the estimated selection curve by species.

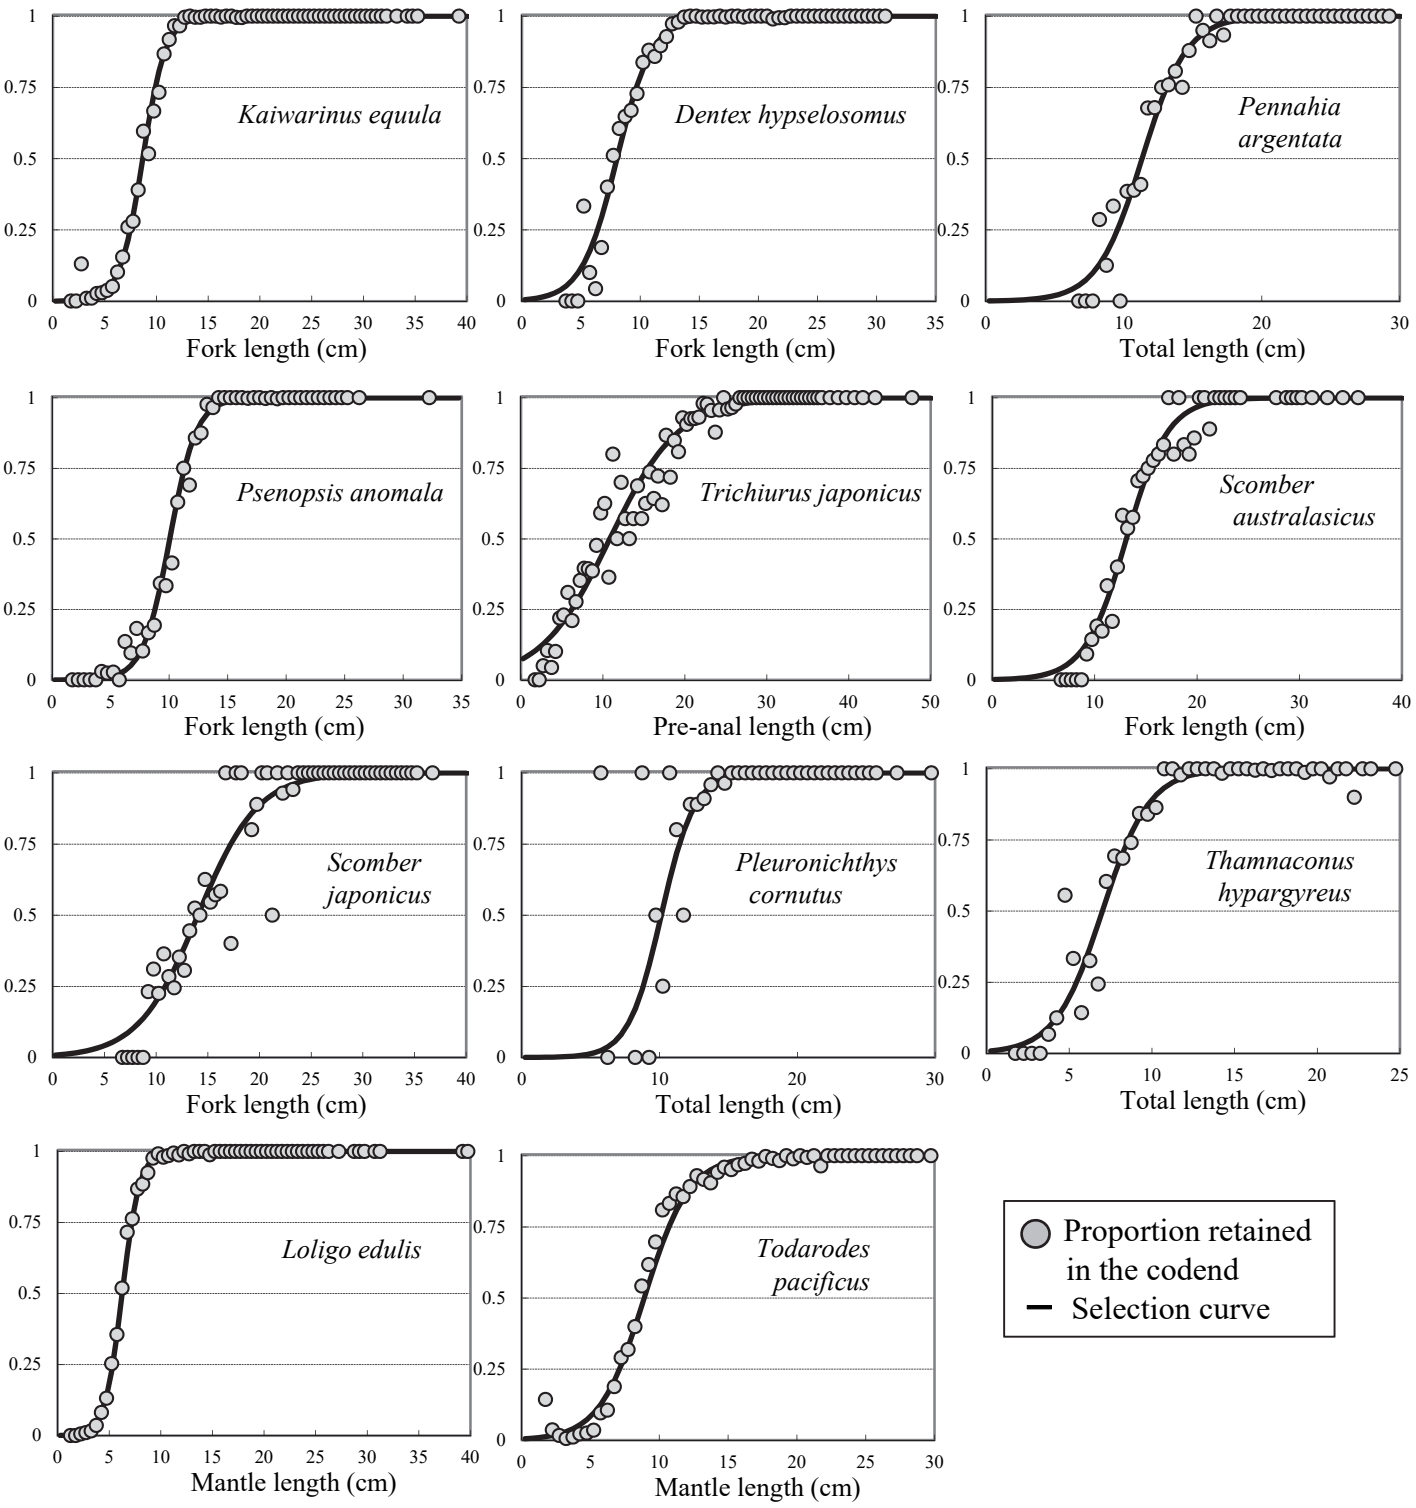

Fig. 2. (continued)

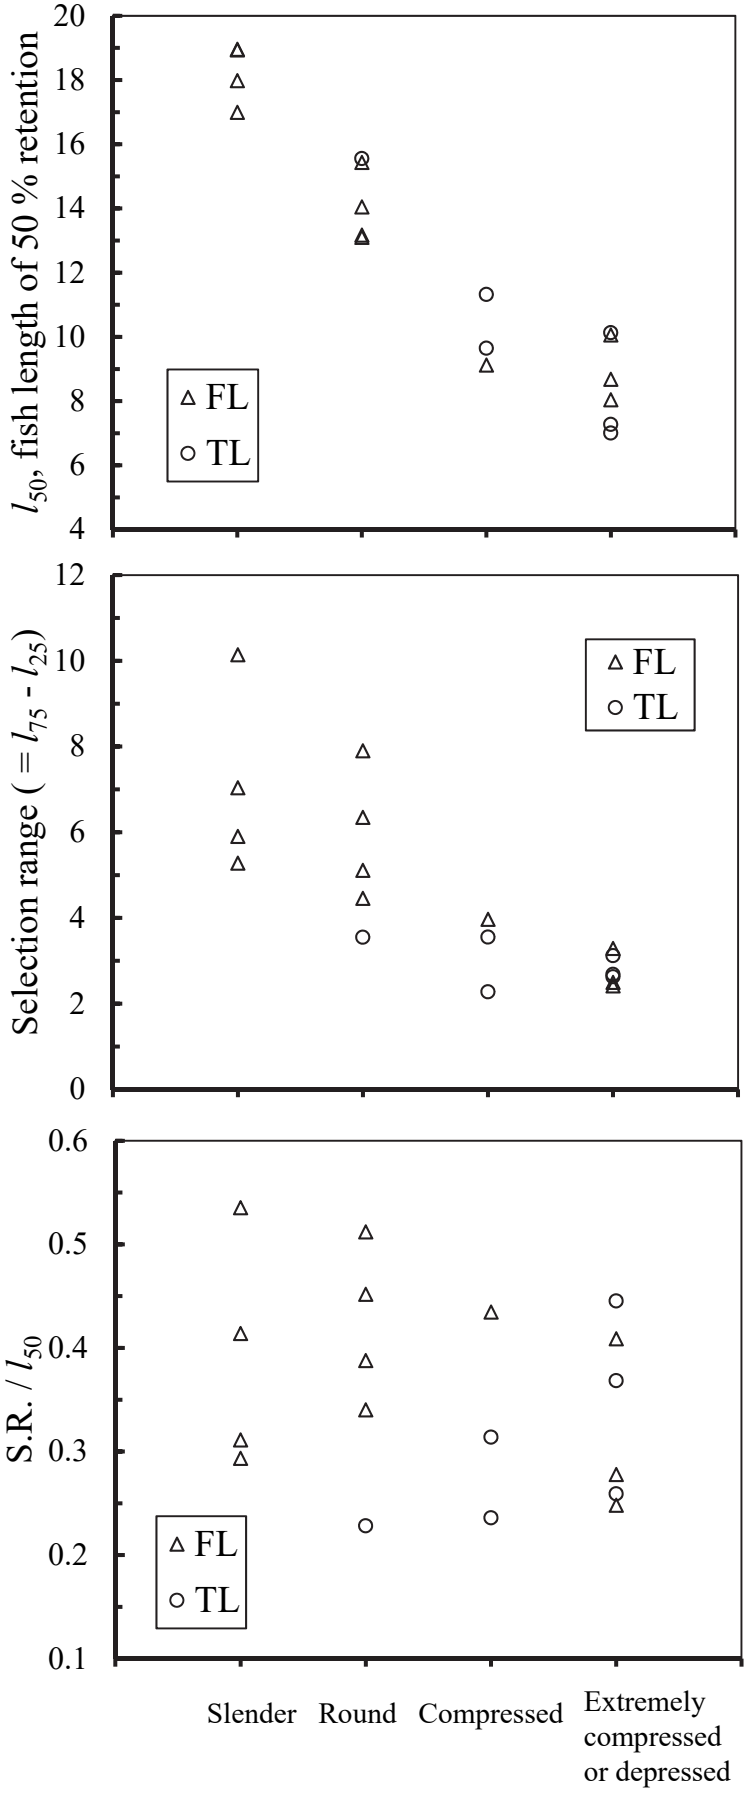

Fig. 3. Length of 50% retention, selection range, and ratio of the selection range to 50% retention length in the codend selection curve in relation to fish body shape.

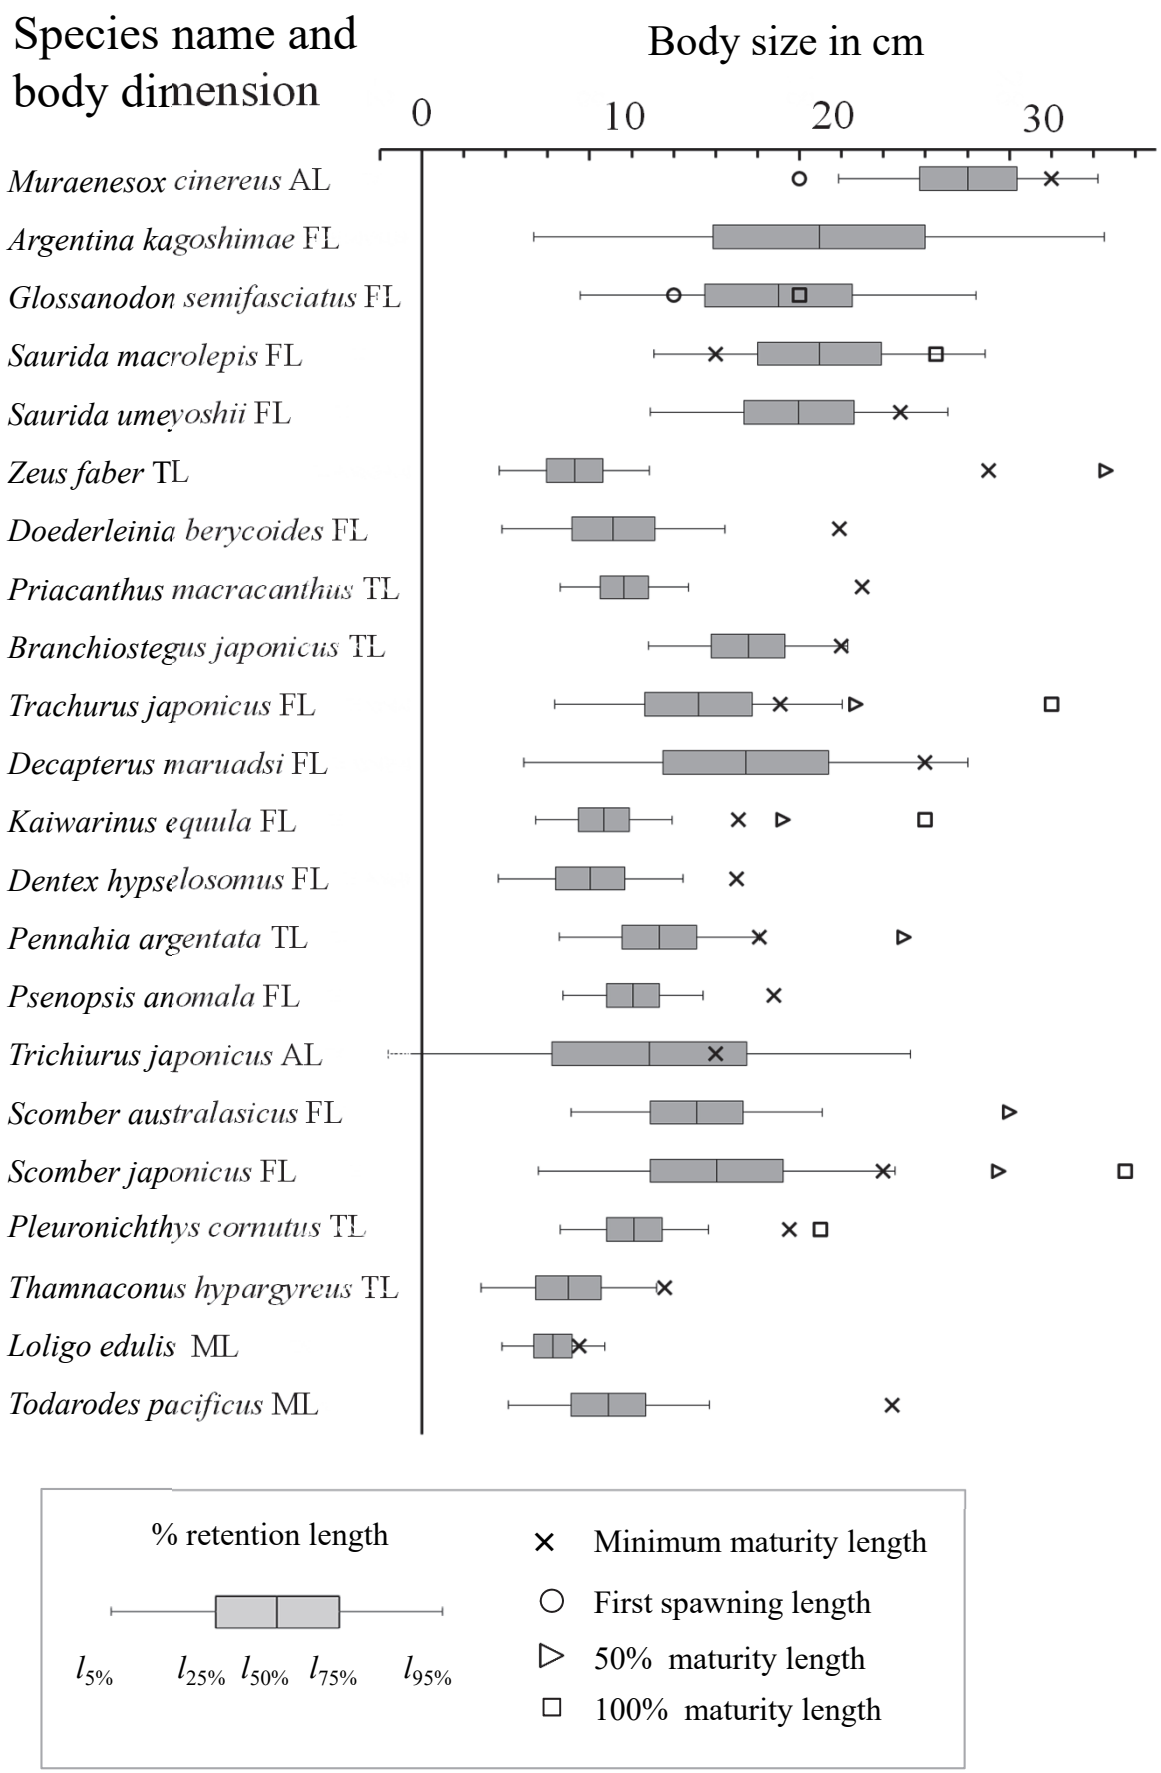

Fig. 4. Comparison between maturity size parameters of female and codend selection lengths by species.
